

How **COMFORTABLE** are you with people reading your **PRIVATE MAILS**?

DiaMail

Recently a number of **e-mail accounts** of **diamond companies** were **hacked**. These hackers sent out mails to clients with details of **existing invoices, providing false payment instructions**. These instructions requested payment to the hacker's off-shore accounts.

These **false mails** were written in the exact same format as previous mails and signed with the same name and signature. **These mails looked real!**

DiaMail offers you:

Complete protection

- Banking level security using digipass login (Password changes every 30 seconds).
- Brute force and key-logging attack is therefore rendered impossible.
- No storage of e-mails on any external servers.

Secured connection independent of working environment

- 4096-bit SSL encryption.
- Secured and encrypted exchange of information between client and server.
- No account information logged in any local network.

Closed e-mail circuit

- No e-mail traffic over the unsecure internet making interception impossible.
- Only authenticated mails from trustworthy sources can be received eliminating the risk of receiving forged e-mails.
- Automated SMS notification on cell phone when mail is received.

Global presence in the diamond industry

- Present in the market since 1988.
- Core-systems in every major diamond center.
- In-depth knowledge of market needs.
